### **DETAILED ACTION**

Claims 1-47 are pending.

Claims 3-10, 15-19, 24-47 are withdrawn.

Claims 1,2, 11-14, 20-23 are at issue.

#### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 7/11/08 has been entered.

Applicants have amended the claims to insert different groups at 1, 4, 5 and 8 positions. The previous rejection under 35 USC 112 first paragraph over enablement of solvates anhydrides, tautomers and salts still stands over claims 1, 11, 13, 14 and 20.

The specifications has one exaction process on pages 11 and 12 and uses a limited number of reagents. Theses reagents cannot form all the salts solvates and anhydrides.

Regarding solvates:- The claims are drawn to solvates, yet the numerous examples presented all failed to produce a solvate. These cannot be simply willed into existence. As was stated in *Morton International Inc. v. Cardinal Chemical Co.*, 28 USPQ2d 1190 “The specification purports to teach, with over fifty examples, the preparation of the claimed compounds with the required connectivity. However ... there is no evidence that such compounds exist... the

Art Unit: 1625

examples of the '881 patent do not produce the postulated compounds... there is ... no evidence that such compounds even exist.” The same circumstance appears to be true here. There is no evidence that solvates of these compounds actually exist; if they did, they would have formed. Hence, applicants must show that solvates can be made, or limit the claims accordingly.

The rejection still stands.

New grounds of rejection

***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1, 11,13, 14, 20 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

In re Wands, 858 F.2d 731, 737, 8 USPQ2d 1400, 1404 (Fed. Cir. 1988).

The claims have been amended to insert the optional substituents at 1, 4, 5, 8 to be halogen, amine, amino, imino, carboxylic acid or amide.

The specification do not have the written description for these substituents nor for them to be at the specific positions. This changes the scope of the compounds and as such is new

Art Unit: 1625

matter. The specifications lacks written description that these groups can be present at these various locations and as such this constitutes “new matter”.

### ***Conclusion***

Claims 2, 12, 21, 22 and 23 are found to be allowable.

Claims 1, 11, 13, 14 and 20 are rejected.
